

What will it take to deliver an effective Digital Identity Infrastructure?

- ❖ Stakeholders – all have to chip-in
 - ❖ Industry: viable new business models not only technical standards (Fed.Id)
 - ❖ Government: Build Trust/Raise Awareness/Use Open Standards
 - ❖ Users: Better understand current & future Privacy/Security risks
- ❖ Private/public sector co-operation
 - ❖ Close co-operation is needed but difficult as divergence in needs:
 - ❖ Trust + data protection, Global vs Local networks, legal frame (open or bilateral ok)
- ❖ Further Interoperability Initiatives
 - ❖ Example of European Health Card (to replace E111 as of end 2005)
 - ❖ Legal + Procedural IOP before technical solution in place
